

A400 4-Leg Series Aircraft Jacks & Accessories 6,000 lb. Capacity

The A400 Series from Meyer Hydraulics has served as the general aviation industry standard for over 45 years. Professional service technicians rely on the A400 Series for the confident lifting of aircraft weighing up to 8,000 lbs. with the security and features one should demand in aircraft jacks.

Features..

- (A) **STEADY KNOBS** Prevent motion when aircraft is elevated.
- (B) **CONVENIENT HOLE SPACING**
- (C) **POSITIVE SAFETY LOCK** Spring loaded safety pin "pops" into the slide tube to prevent accidental lowering.
- (D) **ANTI-SNAG ROUND TUBE**
- (E) **LOW-HEIGHT LEG DESIGN** Provides maximum gear door clearance with one section completely free of any protrusions. The 4 legs insure excellent stability.
- (F) **THREE 3" SPRING LOADED CASTERS:** The steel leg tips never scuff across the hanger floor.

A419 and A421 VeryLow Aircraft Jacks

Designed primarily for the new class of aircraft called Very Light Jets (VLJs). Each jack features an ultra low and the maximum stroke range necessary for the large landing gear movements found on these jets.
